

Extended Mission  
Patch 002: Errata  
17<sup>th</sup> May 2009

**New text added after Patch 001 shown in bold.**

Page 2:  
Replace the section on tertiary tasks with the following:

- A *tertiary*, or *bit-flip* task begins with Result[0] and Result[1] set, Result[2] and Result[3] clear. The player rolls a die to try to set Result[2]. For a standard task, she may reroll until the task succeeds. An *immediate bit-flip* (see below) takes no time and does not interrupt other dice rolls. If the affected player fails, she doesn't take her dice roll, but can try again to overcome the interference when she is next able to take a turn. Tertiary tasks don't risk malfunctions.

Page 3:

**In the last sentence for the assist task, delete "on the same turn".**

Replace the Robot Attacks on Core Systems table with this table:

Robot Attacks on Core Systems (d8)	
1-2	Mission computer
3-4	Power supply
5-6	Heater/radiator
7-8	Low-power antenna

Replace the Biological Attacks table with this table:

Biological Attacks (d10)	
1	Mission computer
2-3	Power supply
4-5	Heater/radiator
6	Low-power antenna
7	Peripheral #1
8	Peripheral #2
9	Peripheral #3
10	Peripheral #4

In the second paragraph for the interfere task, add "immediate" to "bit-flip task", replace the second sentence as follows: "This is an exception to the rule that biologicals only use secondary tasks" and delete the third sentence.

Page 4:

**Delete "tertiary task to receive" from the low-power antenna's description.**

Add to the description of the low-power antenna: "If Result[3] set, the antenna only works intermittently. The probe can still receive commands and send basic status reports to Mission Control, using many repetitions of each message. Although a low-power antenna is a peripheral system, it counts as a core system for purposes of the disable systems task."

Page 5:

**In the description of landing a rover, change "extended primary task" to "primary task".**

Page 6:

For improved software, delete the sentence beginning "One of the probes must attempt a secondary task..."

For all listed robotic Earth inhabitants, replace "Mission computer, power supply, heater/radiator if required" with "Standard core systems" (but retain the anti-missile installation's improved power supply).

Page 7:

For Weather, add "immediate" to "bit-flip" and delete the parenthesis. **Add to the end of this section: "Bad weather typically persists for 1d8 sols".**
